

About Me

Android Engineer with 5+ years of experience building and modernizing large-scale multi-module Kotlin applications. Delivered payments and financial flows in a regulated domain, including authentication, deposits, and withdrawals across several markets — designing a shared integration layer that cut new provider integration time by ~35%. Led the modularization from 5 to 25+ independently scoped modules and reduced build time by 33%. Experienced with backend development in Ktor and currently focused on Kotlin Multiplatform and Compose Multiplatform.

Skills

- Core Technologies:** Kotlin, Java, Jetpack Compose, Compose Multiplatform, Kotlin Multiplatform
- Android Development:** Android SDK, Navigation Component, WorkManager, Deep Linking, Bluetooth, Material Design
- Architecture & Patterns:** Clean Architecture, Multi-module Architecture, MVVM, MVI
- Asynchronous & Reactive:** Coroutines, Flow, RxJava2
- Networking & Backend:** Retrofit, OkHttp, Ktor, REST APIs, WebSockets, Kotlinx Serialization, Jackson, OAuth 2.0
- DI & Build Tooling:** Hilt, Koin, Gradle Kotlin DSL, Version Catalog, Convention Plugins
- Persistence & Local Storage:** Room, DataStore, Realm, SQLite
- Testing:** JUnit, Mockk, Mockito, Robolectric, Espresso, Ultron, Turbine
- Firebase & Analytics:** Firebase Analytics, Crashlytics, Remote Config, FCM, AppsFlyer, Amplitude
- Tools & Practices:** Git, GitLab CI/CD, Detekt, Agile/Scrum
- AI-assisted Development:** Claude Code, OpenAI Codex, Cursor, Gemini, Context7 MCP, Graphify
- Additional:** Flutter (Riverpod, go_router, dio, freezed)

Experience

IS CITY

– 1 mo

Android Software Engineer | Aug 2026 – Present | Full-time
IS CITY develops IT solutions for the **ΦOPA (FORA)** chain (**part of Fozzy Group**).

ΦOPA (FORA)

– 1 mo

Android Software Engineer | Aug 2026 – Present | Full-time
Consumer retail app with **1M+** installs on Google Play, offering grocery and food delivery, loyalty rewards, and personalized promotions for the Fora supermarket chain (**300+ stores**).

Favbet Tech

– 2 yrs

Android Developer | Apr 2024 – Apr 2026 | Full-time
Regulated online entertainment platform operating in Ukraine, Romania, and Croatia, with monthly active users approaching **1M**. Owned the payments, authentication, KYC, and responsible gambling (RG) domains.

- Designed and executed the modularization from **5 to 25+** independently scoped modules, enabling per-market builds on shared business logic
- Optimized Gradle build configuration using Convention Plugins and Gradle Properties, reducing build time by **33%**
- Designed a common payment integration layer with shared interfaces and reusable UI components, reducing a new provider to a single contract implementation and cutting integration time by **~35%**
- Built **8+** payment integrations from scratch, including Neteller, CorvusPay (card and Revolut), IBAN via UPC, and crypto wallet deposits and withdrawals with QR support
- Migrated **30+** screens from XML to Compose, keeping the app at **99.7% crash-free** throughout
- Rebuilt authentication and registration with OAuth 2.0 social sign-in, KYC identity verification, and market-specific signup variants
- Decoupled rewritten features from the legacy monolith so they could be covered with unit and integration tests in CI
- Implemented feature flags and remote configuration for controlled rollouts across login, registration, and payment flows, enabling product behavior to be adjusted at runtime **without a new release**
- Implemented RG controls adapted to each market's regulatory requirements

Flutter Developer | Feb 2026 – Apr 2026 | Full-time
Flutter version of the same platform, within the payments and responsible gambling domain.

- Ported payment flows from the native Android app to Flutter
- Delivered new features and bug fixes across payment and responsible gambling screens

Leap Consulting Group

– 4 mos

Android Developer | Jan 2024 – Apr 2024 | Full-time
US-based consulting firm delivering engineering solutions for enterprise clients in regulated industries.

- Built a standalone Android library (AAR) that collected system-level logs from a custom AOSP-based communication device with a physical handset and touchscreen, and uploaded them to a backend service
- Delivered the library to another team building applications for the same device, along with API documentation and integration specifications
- Developed automated UI tests for Android applications using Appium

Covent IT (formerly ASTA.MOBI)

– 1 yr

Android Developer | Jan 2023 – Dec 2023 | Full-time
Software registrar of settlement operations (PRRO) — a mobile point-of-sale and fiscal receipt system for retail, shipped in two variants: a full-featured Android app on Google Play and a size-constrained build for bank payment terminals.

- Migrated receipt handling and local database storage to a shared cross-platform SDK used by both Android and iOS clients, as part of a team-wide rework of the offline mode
- Implemented Bluetooth receipt printing, allowing merchants to operate without a dedicated POS terminal
- Built a white-label variant for a client with custom branding, icons, and color scheme on top of shared business logic, delivered in **~2 months**
- Adapted the terminal build to strict package **size limits** while preserving sales, shift open/close, reporting, and receipt printing
- Owned Google Play releases and store updates for both app variants

ASTA.MOBI

– 2 yrs

Android Developer | Apr 2021 – Jan 2023 | Full-time

- Developed features for the PRRO product in Kotlin and Java
- Implemented and supported integrations with POS systems and bank payment terminals
- Took over Google Play Console releases after **~1 year**, moving from backup to primary release owner
- Analyzed application behavior using Firebase Analytics and improved app stability and performance through debugging and refactoring
- Built the UI and Google Maps integration for a separate scooter-rental application, covering location tracking and rental flows

Trainee Android Developer | Jan 2021 – Mar 2021 | Full-time

- Built a marketplace application from scratch, implementing Firebase Authentication with Google Sign-In and using Firebase as the backend
- Delivered the app working from design mockups in a largely self-directed environment

Pet Project

Supplements E-commerce Platform (Kotlin Multiplatform) 

2026 – Personal end-to-end e-commerce product: a multi-category store for dietary supplements, built from scratch with Android, iOS, and Desktop clients sharing business logic and a custom Ktor backend.

- Built a shared KMP core covering networking, DI, and navigation, with UI in Compose Multiplatform across all three targets
- Designed a type-safe networking layer with a custom ApiResponse abstraction for centralized error handling
- Wrote a custom Ktor backend with Exposed ORM and SQLite, so the project runs end to end without third-party services
- Integrated Google Sign-In and Firebase Authentication across all platforms
- Set up Gradle Convention Plugins and a Version Catalog as a single source of truth, and GitLab CI/CD for automated builds

Education

- 2022 – 2023

Vinnytsia National Technical University

Master's degree, Computer and Information Systems Security/Information Assurance
- 2018 – 2022

Vinnytsia National Technical University

Bachelor's, Computer and Information Systems Security/Information Assurance

Languages

- English — Upper-Intermediate (B2)
- Ukrainian (Native)
